

利用阿里云下载国外镜像

在国内下载 k8s.gcr.io 的镜像时，可能会遇到连接超时或下载失败的问题。本文将介绍如何通过阿里云容器镜像服务来顺畅地下载这些镜像。

一、问题描述

在配置使用k8s部署 rook-ceph 集群时，需要下载以下六个镜像，但可能会遇到下载失败的问题：

docker复制

```
1 ROOK_CSI_CEPH_IMAGE: "quay.io/cephcsi/cephcsi:v3.13.0"
2 ROOK_CSI_REGISTRAR_IMAGE: "registry.k8s.io/sig-storage/csi-node-driver-
  registrar:v2.13.0"
3 ROOK_CSI_RESIZER_IMAGE: "registry.k8s.io/sig-storage/csi-resizer:v1.13.1"
4 ROOK_CSI_PROVISIONER_IMAGE: "registry.k8s.io/sig-storage/csi-provisioner:v5.1.0"
5 ROOK_CSI_SNAPSHOTTER_IMAGE: "registry.k8s.io/sig-storage/csi-snapshotter:v8.2.0"
6 ROOK_CSI_ATTACHER_IMAGE: "registry.k8s.io/sig-storage/csi-attacher:v4.8.0"
```

错误信息如下：

```
1 Error response from daemon: Head "https://registry.k8s.io/v2/sig-storage/csi-node-
  driver-registrar/manifests/v2.13.0": dial tcp 34.96.108.209:443: i/o timeout
```

二、解决方法

通过 GitHub 和阿里云容器镜像服务来解决这个问题。

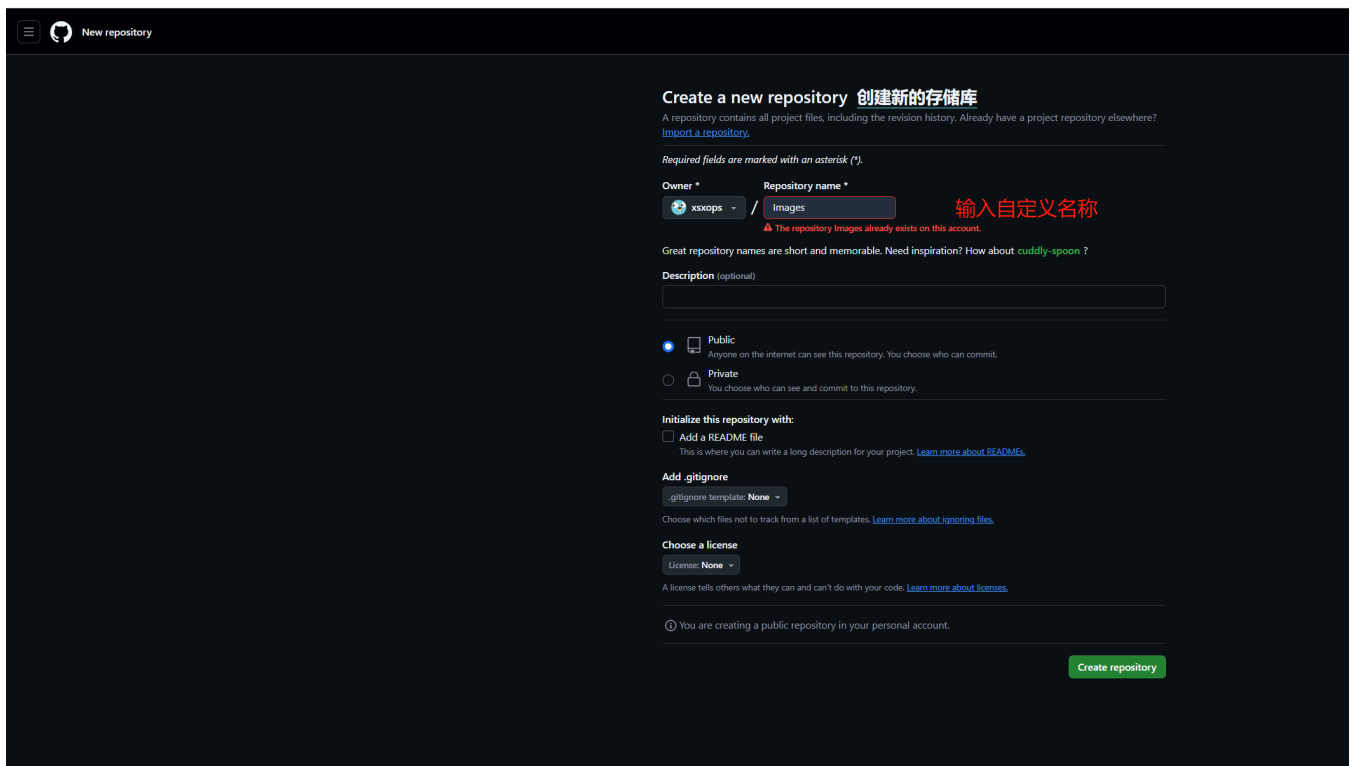

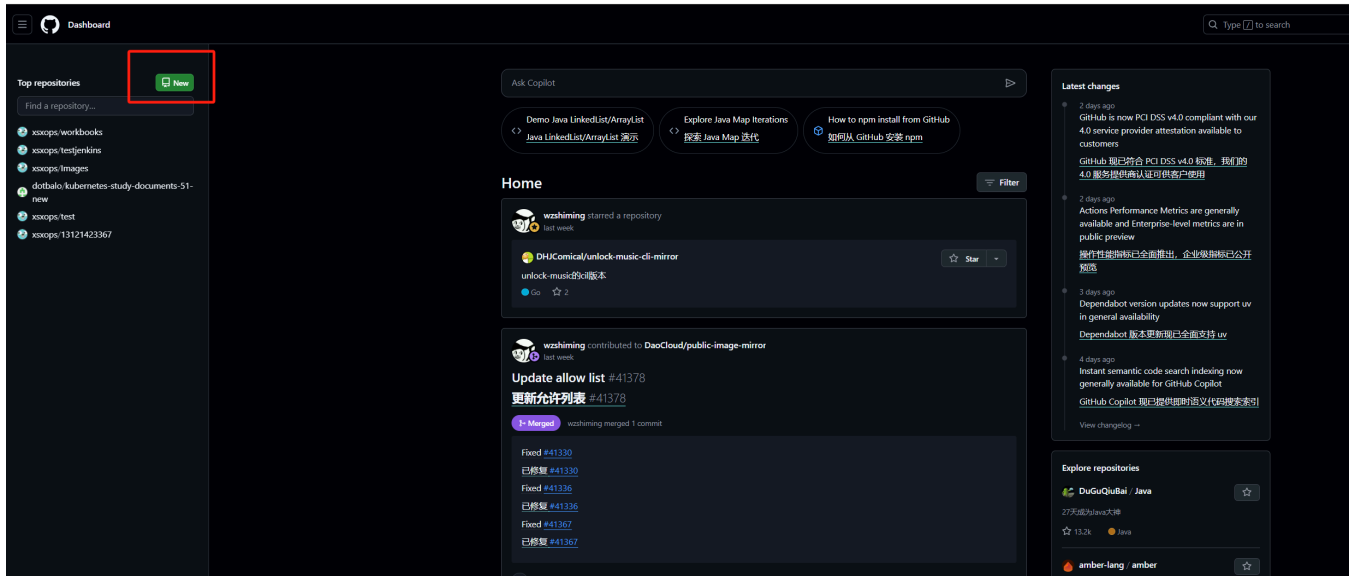

1. 在 GitHub 配置 Dockerfile

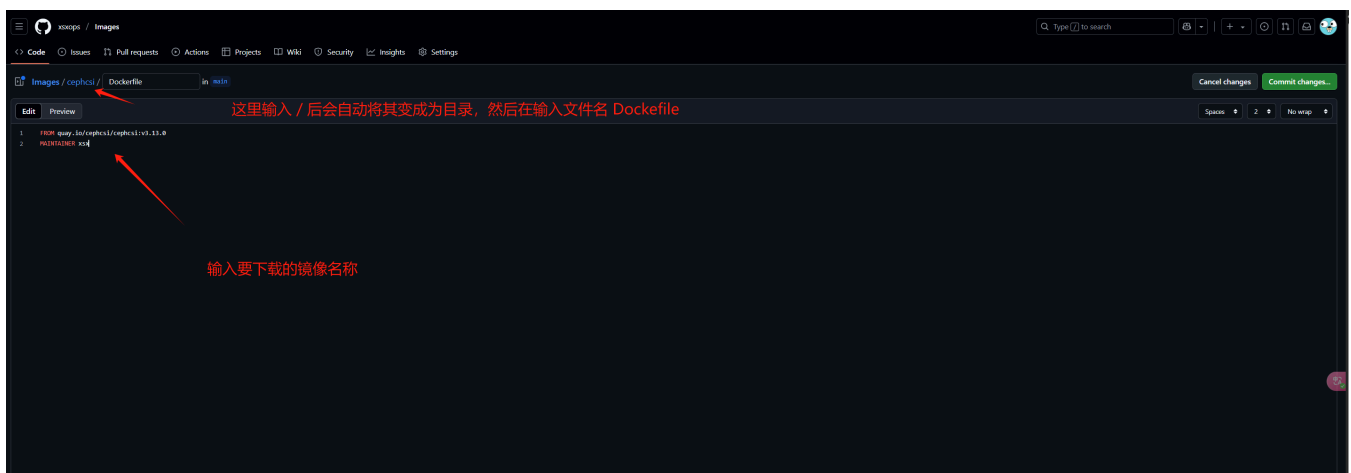

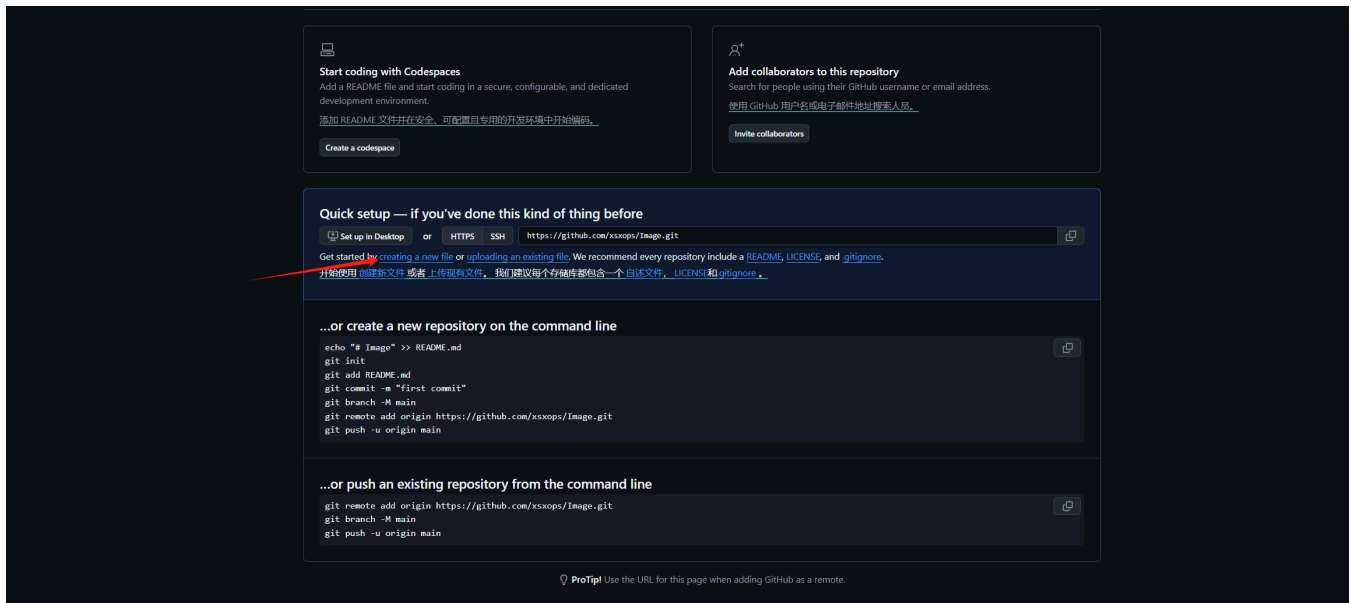

1. 登录 GitHub 并创建一个仓库,比如名称 [Images](#)
2. 为每个想要拉取的镜像创建一个目录，目录名称为该镜像的名称并在每个目录下创建一个 Dockerfile。
3. 在 Dockerfile 中指定相应的镜像路径。

例如，创建六个目录分别对应六个镜像，并在每个目录下创建 Dockerfile：

```
1 # cephcsi/Dockerfile
2 FROM quay.io/cephcsi/cephcsi:v3.13.0
3 MAINTAINER xsx
4
5 # csi-node-driver-registrar/Dockerfile
6 FROM registry.k8s.io/sig-storage/csi-node-driver-registrar:v2.13.0
7 MAINTAINER xsx
8
9 # csi-resizer/Dockerfile
10 FROM registry.k8s.io/sig-storage/csi-resizer:v1.13.1
11 MAINTAINER xsx
12
13 # csi-provisioner/Dockerfile
14 FROM registry.k8s.io/sig-storage/csi-provisioner:v5.1.0
```

```
15 MAINTAINER xsx
16
17 # csi-snapshotter/Dockerfile
18 FROM registry.k8s.io/sig-storage/csi-snapshotter:v8.2.0
19 MAINTAINER xsx
20
21 # csi-attacher/Dockerfile
22 FROM registry.k8s.io/sig-storage/csi-attacher:v4.8.0
23 MAINTAINER xsx
```

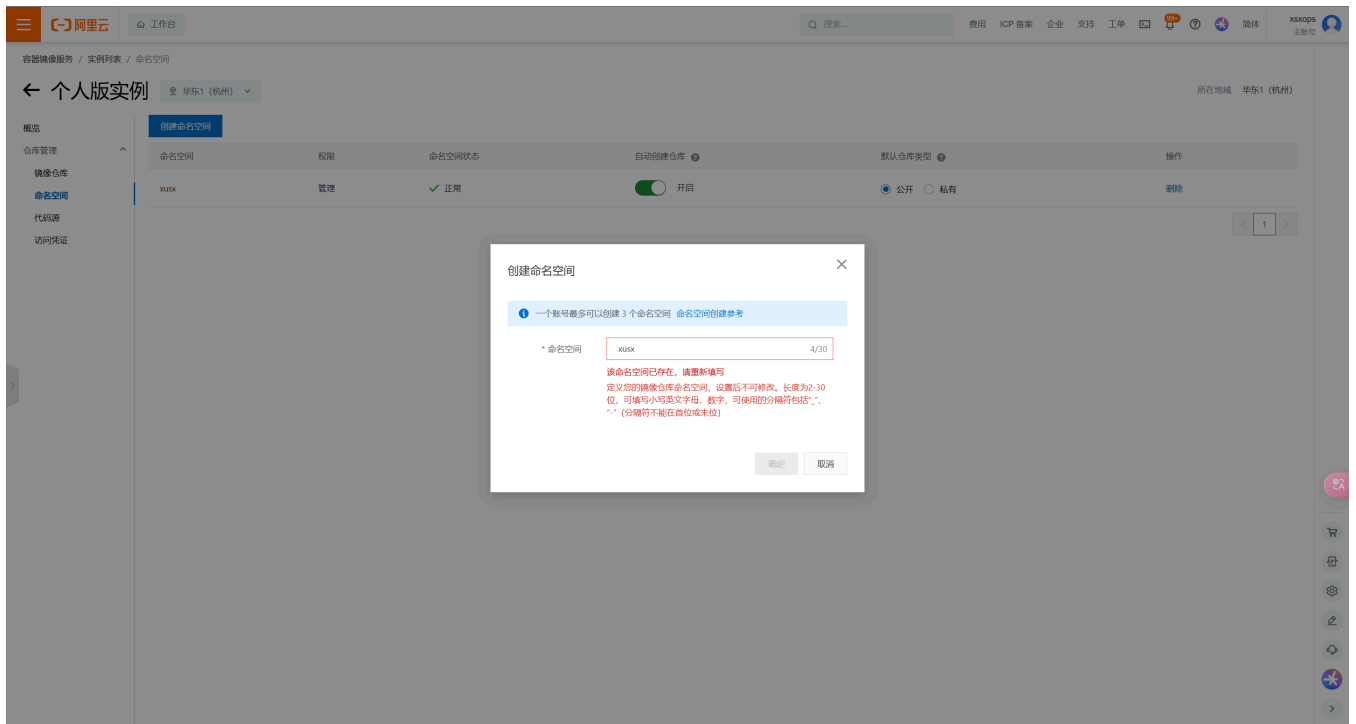

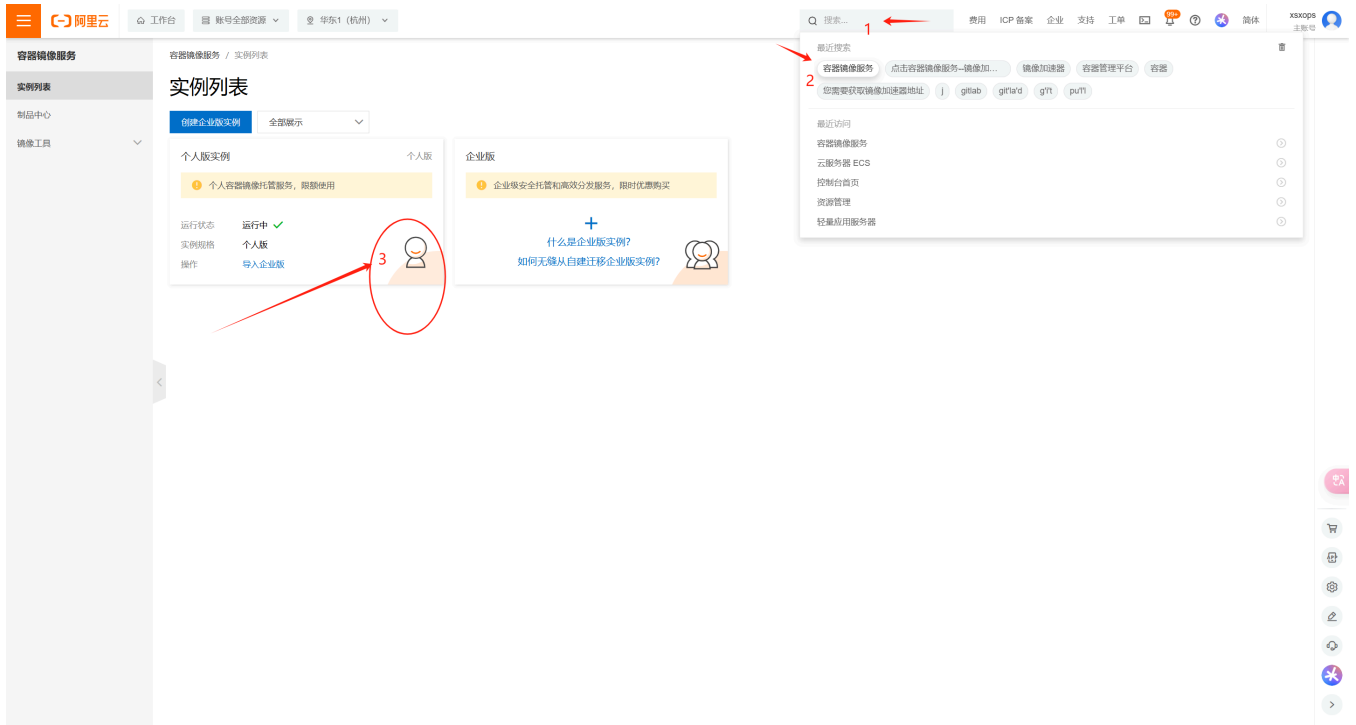

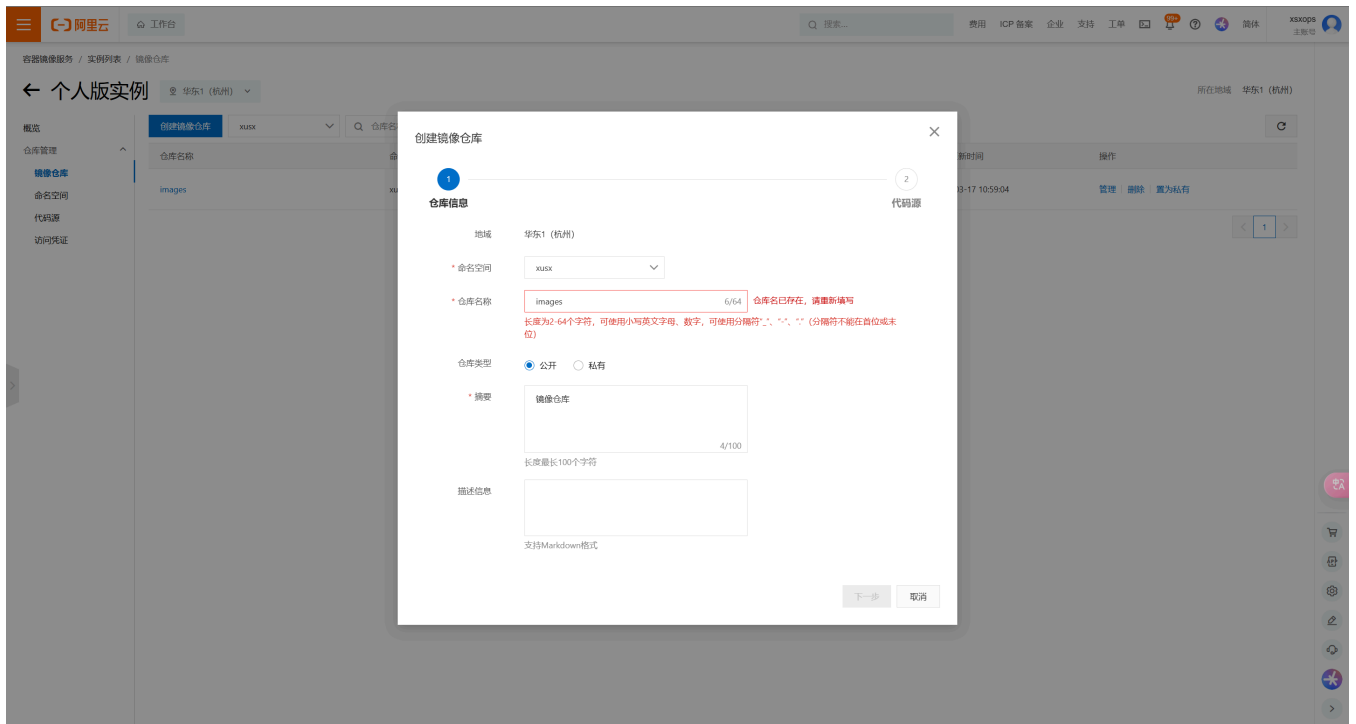

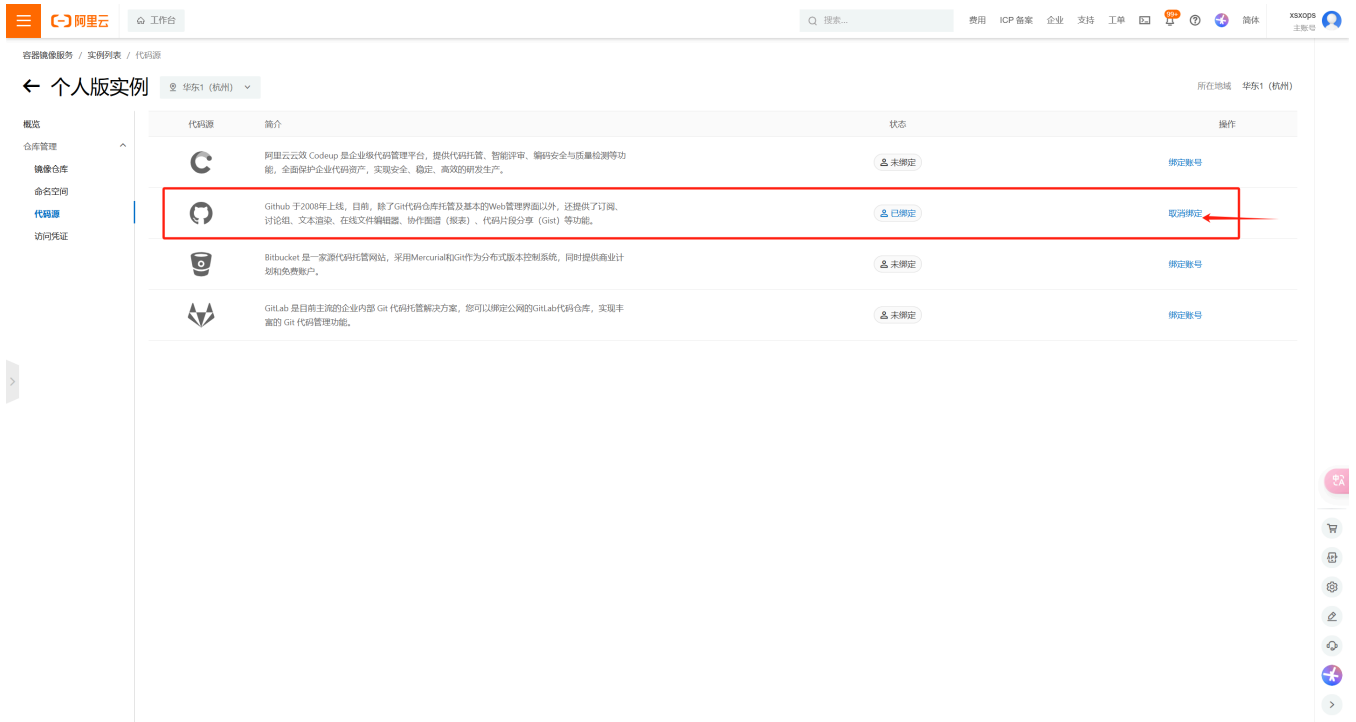

2. 配置阿里云镜像代理

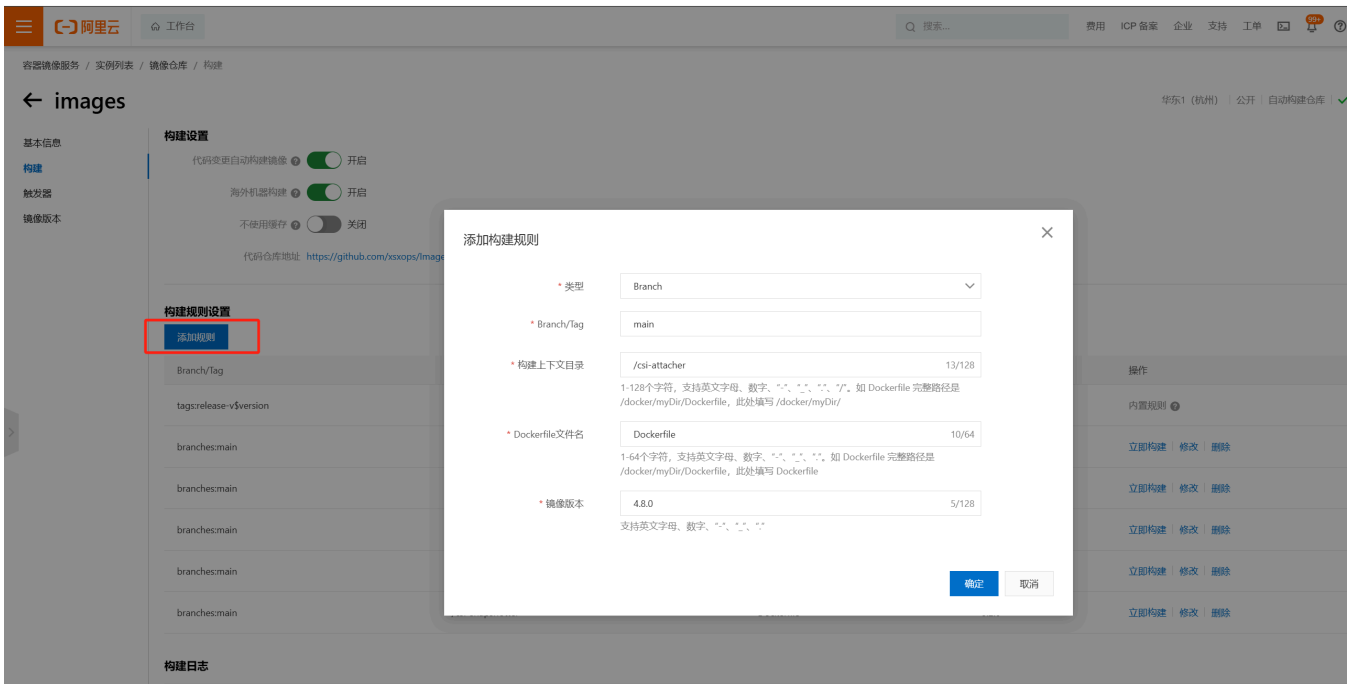

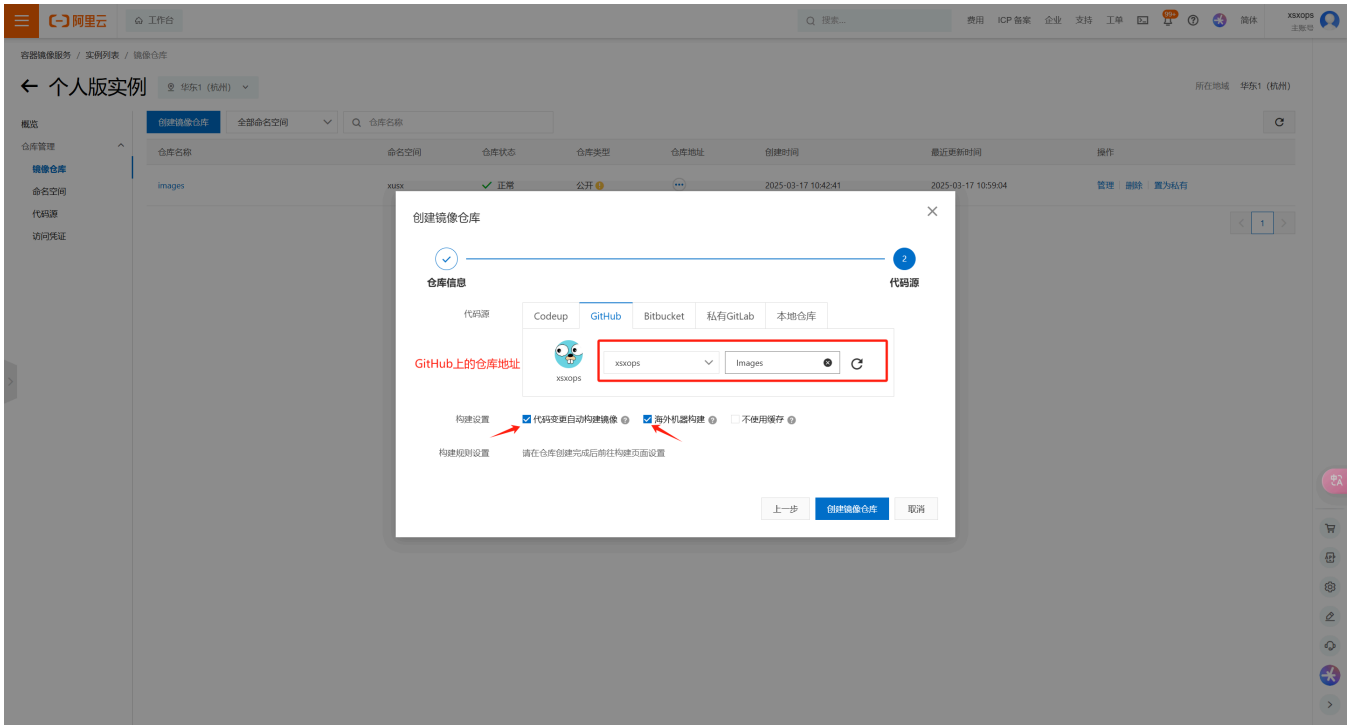

1. 登录阿里云控制台，进入容器镜像服务。
2. 创建一个命名空间（如果尚未创建）。如名称：`xusx`
3. 创建镜像仓库，并授权 GitHub 仓库。
4. 配置构建规则，指定版本号。

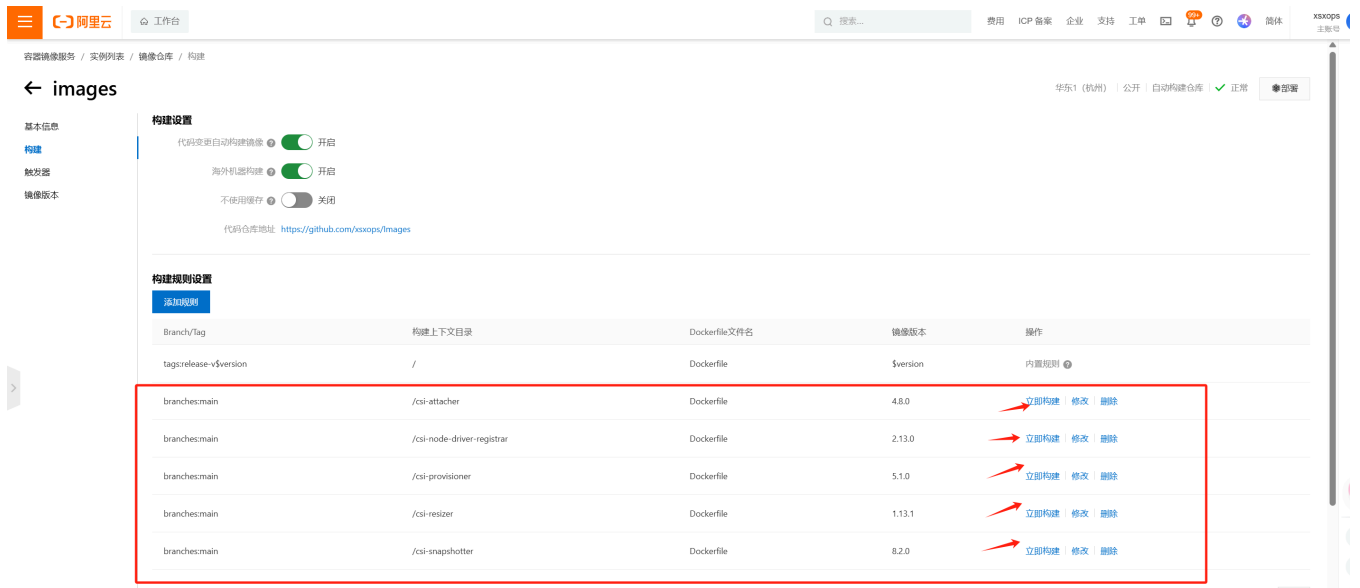

3. 构建镜像

在阿里云容器镜像服务中点击“立即构建”，等待构建完成。

4. 下载镜像

使用 Docker 命令下载镜像：

```
1 #登录阿里云Docker Registry
2 docker login --username=xsxops registry.cn-hangzhou.aliyuncs.com
3
4 #从Registry中拉取镜像,根据刚刚输入的版本号去判断是那个镜像
5 docker pull registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0
6
7 [root@centos7 ~]# docker images
8 REPOSITORY                                TAG      IMAGE ID
9 registry.cn-hangzhou.aliyuncs.com/xusx/images 2.13.0   91db6594b285 2
10 months ago    30.1MB
```

```
1 | ctr images pull registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0
```

```
1 | crictl pull registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0
```

5. 镜像打标签并上传到 Harbor

为下载的镜像打标签和上传到内部 Harbor 仓库：

```
1 docker tag registry.cn-hangzhou.aliyuncs.com/xusx/images:v2.13.0 registry.k8s.io/sig-storage/csi-node-driver-registrar:v2.13.0
2
3 docker rmi registry.cn-hangzhou.aliyuncs.com/xusx/images:v2.13.0
```

```
1 ctr images tag registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0 registry.k8s.io/sig-storage/csi-node-driver-registrar:v2.13.0
2
3 ctr image rm registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0
```

```
1 | crictl tag registry.cn-hangzhou.aliyuncs.com/xusx/images:2.13.0 registry.k8s.io/sig-storage/csi-node-driver-registrar:v2.13.0
```

上传镜像

```
1 | docker push registry.cn-hangzhou.aliyuncs.com/xusx/images:[镜像版本号]
```

三、快速推送镜像

1. 在电脑克隆镜像仓库

```
1 | git clone https://github.com/xsrops/Images.git
```

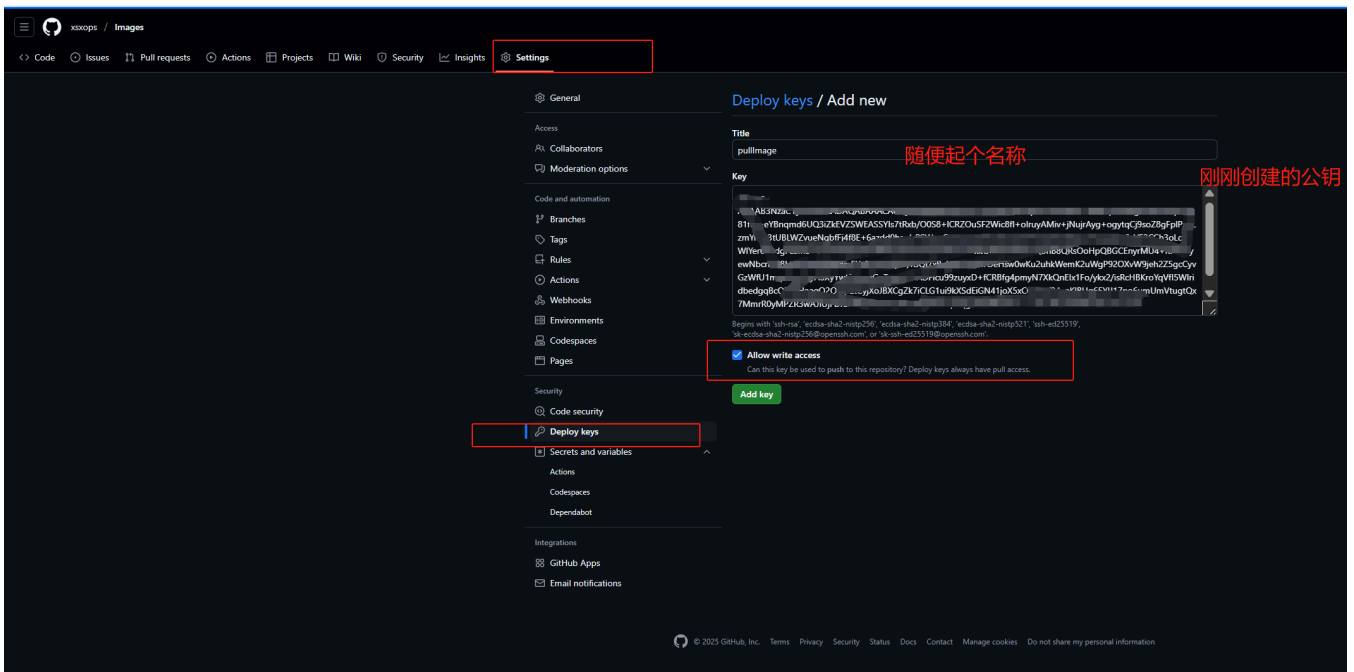

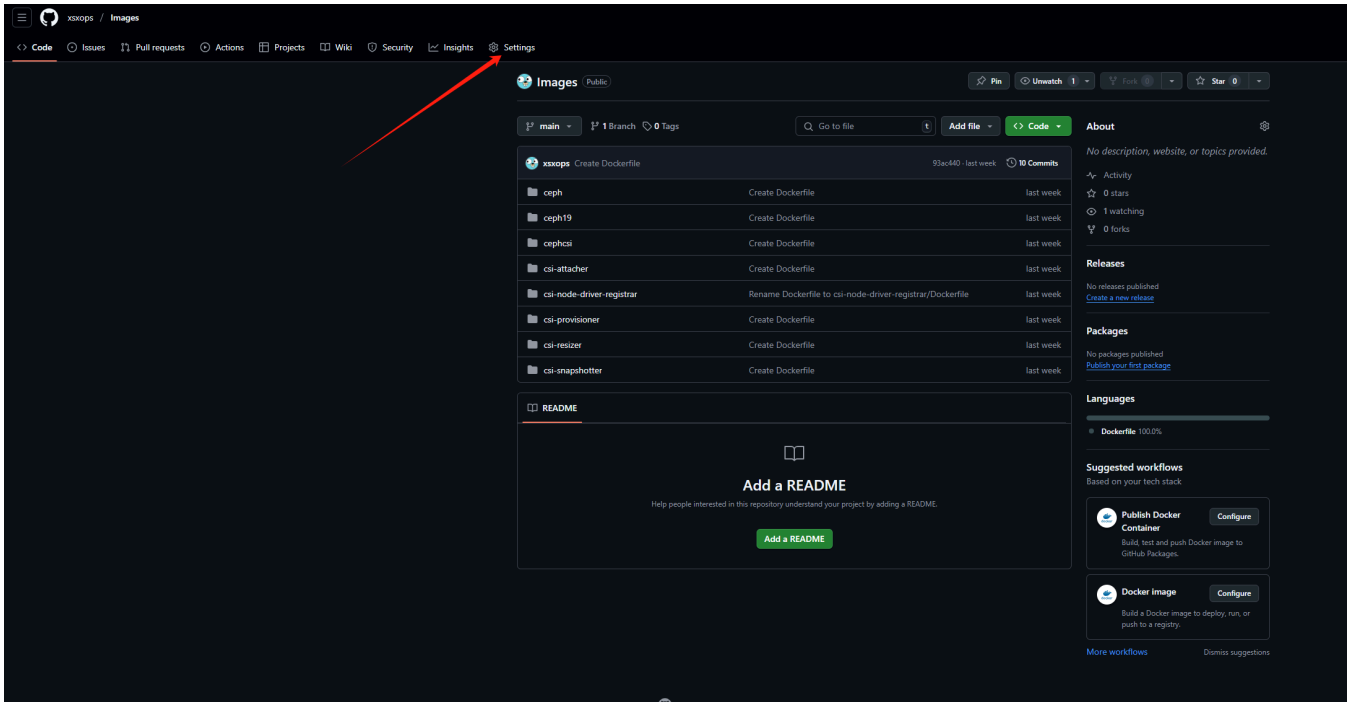

```
13121@MINGW64 /d/Desktop/镜像Hub仓库
$ git clone https://github.com/xsrops/Images.git
Cloning into 'Images'...
remote: Enumerating objects: 36, done.
remote: Counting objects: 100% (36/36), done.
remote: Compressing objects: 100% (24/24), done.
remote: Total 36 (delta 6), reused 0 (delta 0), pack-reused 0 (from 0)
Receiving objects: 100% (36/36), 9.51 KiB | 70.00 KiB/s, done.
Resolving deltas: 100% (6/6), done.

13121@MINGW64 /d/Desktop/镜像Hub仓库
$ ssh-keygen -t rsa -b 4096 -C "13121423367@163.com.com"
Generating public/private rsa key pair.
Enter file in which to save the key (/c/Users/13121/.ssh/id_rsa):
Created directory '/c/Users/13121/.ssh'.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /c/Users/13121/.ssh/id_rsa
Your public key has been saved in /c/Users/13121/.ssh/id_rsa.pub
The key fingerprint is:
SHA256:Luh4Ni+XHHefyS84UALnE9FSLivohzrXiIhmWch9ETs 13121423367@163.com.com
The key's randomart image is:
+---[RSA 4096]---+
|      . = .      |
|     .. = o     |
|    .o = .      |
|   .E. = .      |
|  . o . o S+    |
| o oooo.o .     |
|..ooo=.+.o + o  |
|o++oB =. o *    |
| o . =. . o     |
+---[SHA256]---+

13121@MINGW64 /d/Desktop/镜像Hub仓库
```

2.对代码仓库新建密钥

```
1 | cat ~/.ssh/id_rsa.pub
```

3.配置仓库信息

```
1 # 配置用户名和邮箱
2 git config --global user.name "xsxops"
3 git config --global user.email "13121423367@163.com"
4
5 # 查看本地远端仓库的配置
6 git remote -v
7 git config --list
8
9
10 #新增镜像配置内容后,推送到远端仓库
11 git add .
12 git commit -m "Add README,this is image list"
13 git push origin main
```

```
13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git config --global user.name "xsxops"

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git config --global user.email "13121423367@163.com"

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git add .

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git commit -m "Add README,this is image list"
[main 9631dcb] Add README,this is image list
4 files changed, 23 insertions(+)
create mode 100644 README.md
create mode 100644 controller/Dockerfile

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git remote -v
origin https://github.com/xsxops/Images.git (fetch)
origin https://github.com/xsxops/Images.git (push)

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
$ git push origin main
Enumerating objects: 10, done.
Counting objects: 100% (10/10), done.
Delta compression using up to 18 threads
Compressing objects: 100% (6/6), done.
Writing objects: 100% (9/9), 1.16 KiB | 1.16 MiB/s, done.
Total 9 (delta 1), reused 0 (delta 0), pack-reused 0
remote: Resolving deltas: 100% (1/1), completed with 1 local object.
To https://github.com/xsxops/Images.git
 93ac440..9631dcb main -> main

13121@MINGW64 /d/Desktop/镜像Hub仓库/Images (main)
```

4.验证

打开GitHub 上发现, push的代码已生效

main
